ELINOR INTERNACIONAL

Elinor International's dedication to Security includes a line of action focused on Cybersecurity. Cybersecurity protects personal and corporate information, prevents cyber attacks and fraud, helps to ensure the continuity of business operations, comply with data protection laws and maintain the trust of customers and users in an increasingly digitised and technology-dependent world.

By bringing together Elinor's expertise in Health & Safety and Process Security and GEMED's technological capabilities and operational solvency, we can offer a portfolio of services that are operating in business protection, critical infrastructure and reputational protection.

Arsenio Valbuena Ruiz

Who are we?

GEMED is a Spanish firm with a global presence, specializing in cybersecurity, process automation, regulatory compliance, and technology consulting, with an emphasis on safeguarding critical infrastructure and digital environments.

We offer advanced services such as:

- ◆ SOC, XDR, SIEM, CISO as a Service
- ◆ Process automation and application of IAG tools
- ◆ Consultancy on national and international regulations such as ENS, NIS2, ISO27001, ISO 42001, COBIT, DORA, GDPR

DIGITAL SHIELD:

Enhanced Detection and Response

Digital Shield is a comprehensive protection service that integrates advanced technologies with the expertise of cybersecurity professionals, providing organizations with proactive defense against sophisticated threats.

It continuously monitors servers, PCs, laptops, and smartphones, employing artificial intelligence to identify abnormal behavior and vulnerabilities prior to their escalation into attacks.

In the event of an incident, an immediate and automated response is triggered, assisting in containing the threat and mitigating its impact on the business.

Furthermore, Digital Shield aids in cost optimization, ensures regulatory compliance, and offers assistance from a team of experts dedicated to delivering continuous, efficient protection customized for each organization.

Human Risk Management

This service aims to educate technology users in enhancing their practices, thereby elevating security standards against digital threats. It encompasses:

Phishing, ransomware, vishing, and smishing simulations designed to enhance attack detection training.

Physical intrusion exercises aimed at identifying internal vulnerabilities.

Online training delivered in concise, practical modules.

Real-world or digital simulations.

Informative emails regarding emerging social engineering techniques.

This strategy mitigates human risk in corporate cybersecurity.

CISO AS A SERVICE

Specialized security management services that offer your organization strategic leadership in cybersecurity, eliminating the necessity for an internal Chief Information Security Officer (CISO). At GEMED, we employ six specialists across six essential competencies:

- CISO (Chief Information Security Officer)
- Specialized cybersecurity consultants
- Regulatory compliance and audit professionals
- Awareness and simulation instructors
- Risk and process analysts
- IAG Automation and Tool Application Experts

Providing extensive, adaptable coverage customized for every business environment.

CONSULTORIA EN SEGURIDAD DE LA INFORMACION

GEMED's Information Security Consulting service offers organizations expert strategic guidance in cybersecurity, customized to their operational and regulatory contexts.

REGULATORY AND REFERENCE FRAMEWORKS

GEMED operates in compliance with the primary standards and regulations of the industry:

ISO 27000: Information Security Management System.

RGPD: Protection of Personal Data.

ENS (National Security Scheme): Safeguarding of systems within the public sector.

COBIT: Governance and Management of Information Technology

DORA: Digital Operational Resilience in the Financial Sector.

ISO42001

NIS2: Cybersecurity in essential sectors.

ELECTRONIC SECURITY SYSTEMS

GEMED provides intelligent solutions for the protection of individuals and facilities through video surveillance, access control, and intrusion detection, utilizing artificial intelligence-driven video analytics.

Additionally, GEMED holds the status of GOLD partner with AXIS, a global leader in IP video surveillance.

Our Mission

Intelligent video surveillance utilizing high-performance network cameras equipped with thermal imaging, night vision, and sophisticated analytics.

Access control utilizing secure credentials, tamper detection, and zone management.

Perimeter radar detection for the identification of human and vehicular movement, even under challenging conditions.

Centralized monitoring featuring reporting, alerts, and real-time control across multiple locations.

Body-worn cameras and in-vehicle cameras

WHAT IS BISINT?

BISINT (Business Intelligence for Security and Technology) is a premier digital intelligence service focused on the identification and analysis of risks, cyber threats, and anomalous behavior across diverse online environments, including the deep web and dark web.

Its objective is to convert fragmented and concealed data into valuable insights, providing organizations with strategic assistance for informed decision-making.

This service functions with an ethical, meticulous, and confidential methodology, consistently attuned to the unique requirements of each client.

Our Methodology

01 Research on social media, forums, and cybercrime landscapes.

02 Surveillance of the Clear web, Deep web y Dark web to identify leaks and potential attacks in advance

03 Creation of concise and actionable reports that inform decision-making.

Why place your trust in BISINT?

A thorough and principled approach to digital intelligence analysis.

Access to the deeper layers of the network that frequently remain unnoticed.

Absolute confidentiality in information governance

Reports that produce genuine strategic value and actionable insights

Adaptability to meet the unique requirements of each client, industry, and need.
